

APPENDIX C – Location of Treatment

Aquatic Vegetation Treatment Proposal Form – Lake Athens

Directions: Download Google Earth Pro to your computer: <https://www.google.com/earth/download/gep/agree.html>. Find your property. Choose the Add Polygon tool in the top tool bar. Leave open the Polygon control windows while marking the area you would like to treat. In the Polygon control windows, go to “Style/Color” and choose a Line Color and Width while choosing “Outlined” for “Area”. Then go to “Measurements” and choose “Acres” for “Area” – note the number of acres that it calculates. Name your area at the top of the Polygon control windows and then click “OK” to save your area. Once the Polygon control window closes, you should still see your area outline. Go to “Edit” in the top menu and choose “Copy Image”. Delete the Image and Area amount in the form below and then paste your image while noting your area measurement. Attach this form to your Aquatic Vegetation Treatment Proposal Form.
